Egg Turning

The turning of the eggs during incubation is necessary for the normal development of the chick. Most incubators equipped with turning mechanism will automatically turn the eggs every hour. However, a more even distribution of blood vessels will take place if the eggs are turned 180 degree by hand once a day in addition to the mechanical turning, resulting in higher hatchability.

Parrot Egg Incubation Period

Amazon		Musk	25	Budgerigar	18
Blue-Fronted	26	Ornate	26-28	Canary-Winged	26
