

Buddy Egg Monitor

saves your chicks from Dead in Shell (DIS)!

Innovative and invaluable tool for precise monitoring of embryonic health. This clever box monitors the faint heartbeat of the embryo without disturbing it. Ideal for checking on the health of valuable eggs. Buddy saves lives of chicks by giving the breeder warning of a drop in heartbeat at hatching, in time to intervene and remove the possibility of opening or discarding eggs which still have live chicks inside.

Buddy Mk 1 For normal shelled eggs such as parrot and poultry eggs.

Buddy Mk 2 For thick shelled eggs such as raptor eggs and spotted or dark shelled eggs.

1. Flashing heart & pulse line, chick's heart is beating.
2. Black heart & flat line, no pulse.
3. Animated bird, chick is moving.
4. Flashing battery, replace battery.
5. 3-digit number, heart beats per minute.
