

NEKTON-MSA

Mineral compound for all pets (dogs, cats, pet birds, reptiles and amphibians). Helps prevent calcium, phosphorus and vitamin D deficiencies

NEKTON-MSA is a high-quality mineral blend supplemented with vitamin D3, major/trace elements and amino acids. NEKTON-MSA supports and powers the metabolism and bones, prevents rickets, activates mineral conversion and helps to compensate for the damage caused by calcium deficiency. NEKTON-MSA covers the increasing need for minerals in breeding/rearing, protects against malabsorption, increases defense against infection and prevents fragile eggs in birds. NEKTON-MSA supports good development of bone structures in young animals. It is especially important for your animals for preventing later diseases caused by a deficiency of vitamins and minerals. NEKTON-MSA is not soluble in water and can be mixed without any problems with soft food or bird feed.
