

Portable Brooder

Galvanised Steel

(In-vehicle Use)

Specially manufactured to maintain - by simple operation - the best condition during transportation of eggs or chicks, as well as being particularly suitable as an emergency unit in case of faults or malfunctions of incubators, hatchers or weaning rooms. It can also be used for brooding day-old chicks.

The structure consists of special walls made of pre-painted galvanised sheet thermal panels, with 20mm polystyrene insulation, ensuring perfect isolation and machine solidity.

Temperature is adjustable. The machine can be powered at 12v low voltage (vehicle) and optionally 220v single-phase.

Power Supply : 220-230v / 50-60Hz
12v (vehicle)

Power Consumption : 110 watt

Net Weight : 10kg

Dimensions : 390 x 390 x 290 H (mm)

Internal Dimensions : 350 x 350 x 250 H (mm)
